

## Waiter Calling System Options

Calling for Service at Dining Restaurants  
[Seated guest can call for service]

### Wireless bells system:

Consist of wall mounted Display screen (110-220v power adaptor) to display calling table numbers. Second part is the remote table bell (12v battery operated).

#### Operation:

Each table bell programmed with unique number, any time your guest press the calling button the table's number will be shown on the display screen along with melody sound, transmission distance between the bell and the display screen 50 ~ 80m Coverage area (2,500~10,000sqm).

#### Features:

- LED Display screen with Ding Dong melody sound & volume control.
- Controllable display delay time 5 second, 30 seconds, 5 mints & 20 mints, (the display delay time is the time the called number stay's on the display before it disappear from the screen)
- Signal repeater available to extend the transmission distance in large area if required.
- Each display screen can work with max. 99 bells if you have more than 99 tables then you have to order one additional screen, both screens will work separately with no interference.

#### Optional:

Along with this system you can add a rechargeable waiter pager, this pager allow the waiter to receive the calling numbers from 1-2 Km a way from dining area. Pager comes with belt clip, luminescent backlight LCD for easy reading in dark area and it keeps the last 10 called tables in the memory.

**Note:** pagers can operate with the remote bells regardless of the screen, so it is depend on your requirement you might use the pagers with or without the Display screen.
